

A blurred photograph of a car driving on a road next to a grassy hillside. The car is in the foreground, moving away from the viewer. The road curves to the right. The background shows a large, grassy hillside under a bright sky.

Journey Planning

By Ian Edwards

Using Scenarios

- Why use scenarios?
 - Switching contexts
 - Assist in the development of self-evaluation skills
 - Assist to develop and rehearse strategies
 - Help to develop the instructor's own coaching skills
 - Already starting to be utilised in a number of trials by some local authorities in the UK

Background

- This scenario was originally developed for a local authority in the UK
- It is very simple and can easily be delivered in-car or in a classroom
- I will present the aims for the scenario at the end once ***you*** have discovered these for yourselves

A Simple Journey

You and three of your friends have been invited to go to a party in a town about an hour and half away on a November evening. You are the driver and you and your friends intend to return home after the party. You will need to drive on a variety of roads. You have agreed to meet more friends first, in a bar, before following them to the party.

In groups list all the issues that you feel could increase the dangers of this journey!

The Aims of the Scenario:

- To help the participants consider issues related to level 3 and 4 of the GDE Matrix
- To understand how higher levels of the Matrix influence the lower levels
- For the group to identify issues for further development
- To help the participants understand the limitations of their training
